

ABSTRACT

A padlock that can be unlocked by the owner of the padlock by dialing an unlocking number or by authorized security personals with a general key. The padlock mainly contains a lock body, a shackle, a private locking means and a general locking means.

- 5 The lock body has a first chamber and a second chamber therein. The lock body has a receptacle thereon and a hole communicable to the first chamber. The shackle has a longer arm and shorter arm. The longer arm is slidably received in the first chamber through the hole of the lock body. The longer arm has a stop at an end thereof and the shorter arm is engagable with the receptacle of the block. The private locking means
- 10 is formed in the first chamber. The private locking means contains a frame and mechanism. The frame has a sliding space therein. The frame has a first opening on top thereof for receiving the end and the stop of the longer arm in the sliding space. The mechanism is used for controlling movements of the frame. The frame is movable between the mechanism and the hole of the lock body. The general locking
- 15 means is installed in the second chamber for controlling movements of the end and the stop of sad longer arm.
